                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a human or humanised antibody (Ab) which specificially binds to fibroblast activating protein alpha (FAPalpha). The antibodies are useful for preparing a composition for the treatment of cancer, and for imaging tumours associated with activated stromal fibroblasts, such as colorectal cancer, non-small-call lung cancer, breast cancer, whead and neck cancer, ovarian cancer, lung cancer, bladder cancer, pancreatic cancer and metastatic brain cancer, and diseases
                                                                                                                                         119

                                                                                                                                                                                                                                                                   2
                                                                          The present invention relates to a human or humanised antibody (Ab) which specifically binds to fibroblast activating protein alpha (FAPalpha). The antibodies are useful for preparing a composition for the treatment of cancer, and for imaging tumours associated with activated stromal fibroblasts, such as colorectal cancer, non-small-cell lung cancer, breast cancer, head and neck cancer, ovarian cancer, lung cancer, bladder cancer, pancreatic cancer and metastatic brain cancer, and diseases associated with the same, such as inflammation and wound healing. The present sequence is a coding sequence described in the exemplification of

throughput generation and screening of a human antibody or immunoglobulin (Ig) library in yeast. The method comprises expressing a library of tester fusion proteins in yeast cells, each tester fusion protein comprises expressing a library of tester fusion protein activation domain or a DNA binding domain of a transcription activator and a tester protein having a large diversity within the library. The tester protein comprises a first polypeptide subunit (e.g. human variable heavy-chain, VH) whose sequence varies within the library, a second polypeptide subunit (e.g. human variable light-chain, VL) whose sequence varies within the library independently of the first polypeptide, and a linker peptide which links the first and second polypeptide subunits. The method is useful for generating with target antigens. The present DNA sequence represents an anti-ILB serv clone as described in the methods of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       179

                                                                                                                                                                                                                        8
                                                                                                                                                               g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to compositions and methods for high throughout generation and screening of a human antibody or immunoglobulin (Ig) library in yeast. The method comprises expressing a library of tester fusion proteins in yeast cells, each tester fusion protein comprising either an activation domain or a DNA blading domain of a transcription activator and a tester protein having a large diversity within the library. The tester protein comprises a first polypeptide subunit (e.g. human variable heavy-chain, WH) whose sequence varies within the library, a second polypeptide subunit (e.g. human variable heavy-chain, WH) whose sequence varies within the library independently of the first polypeptide, and a linker peptide which links the first of the first polypeptide subunits. The method is useful for generating econd polypeptide subunits. The method is useful for generating with target antigens. The present DNA sequence represents an anti-ILB scrv clone as described in the methods of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    61 TGTGCAGCCTC-GGATTCACCTTTACTAGGAATCCTACGAGCTGGGTACGCCAGGCTCCA 119

The present invention relates to compositions and methods for high throughput generation and screening of a human antibody or immunoglobulin [1g) library in yeast. The method comprises expressing a library of rester fusion proceins in yeast cells, each tester fusion protein comprising either an activation domain or a DNA binding domain of a transcription activator and a tester protein having a large diversity within the library. The tester protein comprises a first polypeptide subunit (e.g. human variable heavy-chain, VH) whose sequence varies within the library, a second polypeptide subunit (e.g. human variable light-chain, VL) whose sequence varies within the library independently of the first polypeptide subunits. The method is useful for generating second polypeptide subunits. The method is useful for generating recombinant human antibodies and screening for their affinity binding with target antigens. The present DNA sequence represents an anti-lib scPV clone as described in the methods of the present invention.

                                                                                                                                                                                              A series of genes (AAQ78939-79002) encoding human immunoglobulin variable heavy chains. The genes were isolated and cloned from a series of cosmid constructs: Y202; Y103; Y21; Y5;Y24; 3-31; M84; M188 and M131, by PCR amplification using primers AAQ78917-38. The genes are subdivided into 5 families of VM genes. The fragments cover a region of 800 kb. The DNA fragments were isolated from high molecular weight DNA from human placenta. The DNA was partially dispeted with Tagl restriction enzyme. The fragments were separated by gel elecrophoresis and 35-45 kb fractions were collected. The fragments were ligated with Cla1-digested cosmid vector pUBBL. The ligation products were in vitro packed and infected into E.coli 490A. The fragments were then subcloned by colony hybridisation. The VM genes and the DNA fragments encoding them are useful in producing human immunoglobulin in mammalian hosts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  406

```
The present sequence encodes a single-chain Apo-2 antibody, designated 20E6, which is isolated from a phage library. It is believed that Apo-2 is a member of the tumour necrosis factor receptor (TMRR) family. Apo-2 polypeptide is capable of triggering caspase-dependent appotosis and activating nuclear factor-kappa B. A soluble extracellular domain of Apo-2 binds Apo-2 ligand (Apo-2L). Apo-2 antibodies may be used to activate or stimulate apoptosis in cancer cells. They are therefore especially useful in the treatment of cancer, to enhance immune-mediated cell death in cells expressing Apo-2, or setul and affainty purification of Apo-2 in specific cells, tissues or serum, and in affainty purification of Apo-2 from recombinant cell culture or natural sources.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New nucleic acids encoding an Apo-2 ligand, useful for activating or stimulating apoptosis in cancer cells, thus especially useful in the treatment of cancer, or in enhancing immune-mediated cell death -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes human Apo-2. Apo-2 can be used therapeutically to induce apoptosis in mammalian cells, and so is useful to the treat conditions associated with decreased apoptosis e.g. cancer.

Apo-2 is believed to be a new tumour necrosis factor (TNP) receptor.

The present conditions associated with decreased apoptosis e.g. cancer.

The proposition of the same apoptosis, thought to be initiated by binding to TNPRs, and Apo-2 triggered caspase-dependent apoptosis. It can be used to identify agents activating Apo-2, useful to treat therapeutically (e.g. those containing immunoglobulin sequences can be therapeutically (e.g. those containing immunoglobulin sequences can be inhibit apoptosis) or diagnostically (e.g. those comprising anti-tag cantibodies). It can be used to produce antibodies which can be combined with a (particularly pharmaceutically e.g. those comprising anti-tag cantibodies). It can be used to produce antibodies which can be combined or used to produce dimeric molecules (especially homodimeric molecules comprising first and second Apo-2 antibodies). Agonistic (especially contained and antibodies can be administered to induce apoptosis in mammalian cancer cells, and anteagonistic antibodies used to block antibodies may also be used diagnostically e.g. to detect Apo-2 excession in cells/tissues and in Apo-2 purification. The present invention provides the protein and coding sequences for human monoclonal antibodies which bind specifically to the HER2/neu growth factor receptor (also known as erbB2). These are designated 3-F2, 1-D2 and 2-B8. They can be used in the immunotherapy-based treatment and prognosis of cancers, particularly adenocarcinomas such as salivary gland, stomach, kidney, mammary gland, lung and squamous cell carcinomas, and ovarian cancer. The present sequence is a coding sequence of an

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to a molecule that binds MCP-1 (human monocyte chemoattractant protein-1). The molecule has at least one antigen chinding site comprising at least one immunoglobulin (Ig) heavy and/or light chain variable domain (Wh, VI). The antibody of the invention preventing binding of MCP-1 (and also eccasin) to specific receptors, so preventing migration of monocytes and T cells. These are human antibodies with very high affinity for MCP-1, but no significant reaction with other human CC-type chemokines or MCP-1 from other species. The MCP-1 binding molecules, specifically antibodies that cross
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New compound that binds human monocyte chemoattractant protein-1, useful e.g. for treating inflammation, comprises immunoglobulin chains with specific hypervariable regions

react with ectaxin, are used to prevent or treat MCP-1 or ectaxin-
mediated disorders, particularly those that involve migration or
activation of monocytes and T cells, e.g. allergies (allergic or in the state of the context dermatitis), inflammatory by a diseases (asthma, psoriasis, COPD, inflammatory bowel disease,
multiple sclerosis) autoimmune diseases of bone and cartilage of stepoprosis, orteoarthritis, periodothal diseases hammatory diseases of exteriors or systemic lupus erythematosus), diseases of bone and cartilage of sorteoarthritis, periodothal diseases) hammatological disorders (hammolytic anaemia, idiopathic thrombocycopaemia) graft rejection, cancers that include leucocyte infiltration, (re)stenosis, arteriosclerosis, osteoporosis and many other diseases listed in the specification. The present sequence represents the human AAV293 anti-(MCP) antibody heavy chain cDNA sequence of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 7, A Sequence 7, A Sequence 7, A Sequence 8, A Sequence 11, A Sequence 11, A Sequence 12, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11, A Sequence 11,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                              1 gtgcagctggtggagtctgg......scctggtcaccgtctcctca 358

GENERAL INFORMATION:

APPLICAMT: Siegel, Donald L.

APPLICAMT: Siegel, Donald L.

TITLE OF INVENTION: Rh(D)-BINDING PROTEINS AND MAGNETICALLY ACTIVATED CELL

TITLE OF INVENTION: SORTING METHOD FOR PRODUCTION THEREOF

FILE REFERENCE: 09596-42U2

CURRENT APPLICATION NUMBER: 60/940,274

CURRENT PILING DATE: 1999-01-29

EARLIER APPLICATION NUMBER: 60/081,380

EARLIER FILING DATE: 1998-04-10

EARLIER FILING DATE: 1996-01-11

NUMBER OF SEQ ID NOS: 224

SOFTWARE: PARENTIN Ver. 2.0

SEQ ID NO 92
